

Dihydropyrimidines And Uses Thereof

Abstract of the Disclosure

5 This invention is directed to dihydropyrimidines which
are selective antagonists for human α_{1a} receptors. This
invention is also related to uses of these compounds
for relaxing lower urinary tract tissue, treating
benign prostatic hyperplasia and for the treatment of
10 any disease where the antagonism of the α_{1a} receptor may
be useful. The invention further provides a
pharmaceutical composition comprising a therapeutically
effective amount of the above-defined compounds and a
pharmaceutically acceptable carrier.
